BEYOND POST-ITS

Introduction

Beyond Post-its is a flexible, powerful toolkit for creative problem-solving. You can use it any time you want to structure a design thinking or innovation session.

Every card in this toolkit has a second side — your **AI Extension** — packed with ready-to-use prompts for ChatGPT (or your preferred AI tool).

Why use them?

Go further, faster — AI can instantly expand ideas, generate variations, and offer new perspectives.

Unblock your thinking — Get fresh angles when you're stuck.

Save prep time — Prompts are pre-written for each tool.

How to use the cards

Combine hands-on tools with AI to accelerate creativity and clarity. Use them in any session that blends physical collaboration with AI-powered thinking.

How to use:

Use the **Card Front** during your workshop to guide the group's activity.

Flip to the AI Extensions on the **Card Back** to access additional prompts and variations.

Scan the QR code to instantly open a pre-written AI prompt in ChatGPT (or your chosen AI tool).

Use AI-generated outputs as inspiration — then refine, adapt, or combine them with the team's ideas.

The Methods

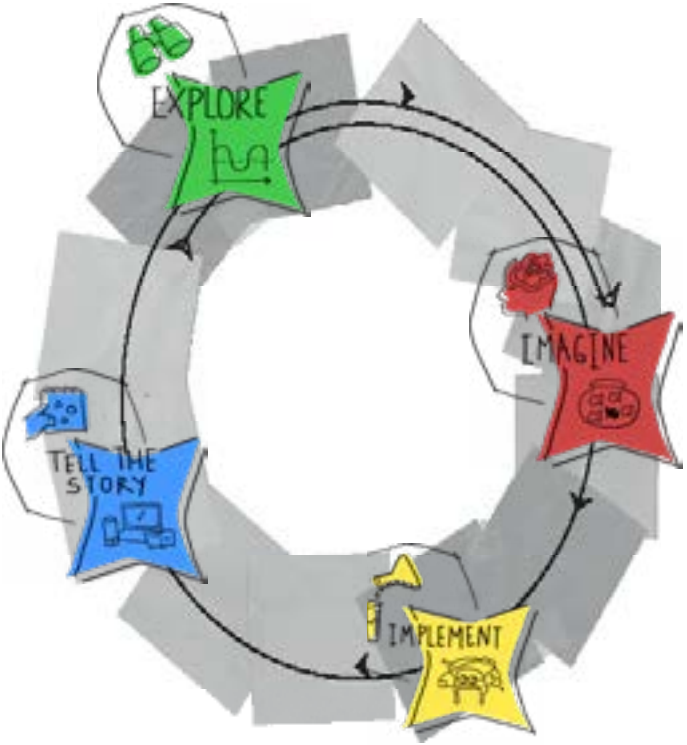
1. Break the Ice
2. Challenge the Brief
3. Frame Wicked Problems
4. Choose Research Methods
5. Plan Research
6. Map Stakeholders
7. Explore Business Context
8. Explore External Context
9. Interview Users
10. Immerse yourself
11. Observe Users
12. Map Empathy
13. Map User Journey
14. Build a Persona
15. Create a Shared model
16. Analyse and Synthesise
17. Draw Insights
18. Define Problem Statement
19. Map Opportunity
20. Frame Opportunity Statement

1. Shift Gears
2. Use Ideation techniques
3. Energise the team
4. Set Ground rules
5. Brainstorm Ideas
6. Brainwrite Ideas
7. Reverse Solutions
8. Ask "What if?
9. Sketch with Crazy 8s
10. Select Ideas
11. Priority using Grids
12. Create a concept
13. Receive/Give Feedback
14. Explore Types of Prototypes
15. Choose Prototype tech niques
16. Test with Users
17. Test the Concept
18. Iterate the prototype
19. Co-iterate with Users
20. Run a Design Sprint

1. Identify Assumptions
2. Frame Hypotheses
3. Plan Experiments
4. Set up experiments
5. Test Desirability
6.Test Feasibility
7.Test Viability
8.Test Sustainability
9 Use business lenses
10. Go-to-market
11. Business model canvas
12. Value Proposition Canvas
13. The 4P Model
14. The 4C Model
15. The Blueprint
16. Test the whole system
17. Pilots
18. Launch
19. Scale
20. Type of Scale

1. Use 4D Frame
2. Discover the purpose
3. Define the audience
4. Develop the content
5. Identify key messages
6. Humanise Data
7. Visualise Data
8. Find Story in the data
9. Structure the story
10. Create a Storyboard
11. Begin Strong
12. Make meaning in the middle
13. End to Make it stick
13. Write crisp titles
15. Write recommendation
16. Deliver for impact
17. Use Voice and Tone
18. Use Body Language
19. Design Presentation Slides
20. Rehearse and Refine

The Process



DIVERGENT THINKING

CONVERGENT THINKING

DIVERGENT THINKING

1. Break the ice
2. Challenge the Brief
3. Frame Wicked Problems
4. Choose Research Methods
5. Plan Research
6. Map Stakeholders
7. Explore Business context
8. Explore External Forces
9. Interview Users
10. Immerse yourself
11. Observe Users
12. Map Empathy
13. Map User Journey
14. Build a Persona
15. Create a Shared model
16. Analyse and Synthesise with Affinity Diagram
17. Draw Insights
18. Define Problem Statements
19. Map Opportunities
20. Frame Opportunity Statements

CONVERGENT THINKING

Guide for Facilitators – Explore Stage

Expanding horizons and framing the right challenge

The Explore Stage is about opening up the problem space. This is where teams broaden their perspective—understanding users, contexts, and challenges in depth—before narrowing down. It's about seeing differently, asking better questions, and discovering fresh opportunities.

Flow Overview

Frame the Challenge – set direction

Conduct Research – gather data

Build Empathy – see through users' eyes

Analyse & Synthesise – make meaning

Define Problems – focus the challenge

Define Opportunities – shape where to play

Facilitator Reminders:

- *Stay divergent first – let teams go wide before narrowing down.*
- *People first – keep the focus on users, not assumptions.*
- *Make it visible – use maps, models, and diagrams to create shared understanding.*
- *Frame well – a sharp problem or opportunity statement is half the solution.*

Facilitator Playbook – Explore Stage

1. Frame the Challenge
- Break the Ice - build openness and trust.
- Challenge the Brief -question assumptions, clarify scope.
- Frame Wicked Problems -identify complexity and tensions.

2. Conduct Research
- Choose Research Methods – select based on depth and scope.
- Plan Research – design interviews, immersions, or surveys.
- Map Stakeholders – identify who influences or is affected.
- Explore Business Context – review internal dynamics.
- Explore External Context – scan market, trends, regulations.

3. Build Empathy
- Conduct User Interviews – design conversations for insight.
- Immerse Yourself – experience the user's world directly.
- Observe Users – watch real behaviour, not just reported stories.

4. Analyse & Synthesise
- Map Empathy – capture needs, pains, and gains.
- Build a Persona – humanise insights with archetypes.
- Create a Shared Model – align team perspectives.
- Cluster with an Affinity Diagram –identify themes in the data.
- Map the User Journey – capture current and future scenarios.
- Draw Insights – extract meaning from patterns.

5. Define Problems
- Frame a Problem Statement – create a focused, human-centred challenge.

6. Define Opportunities
- Map Opportunities – link insights to potential value.

1

Break the Ice

This is an icebreaker activity that takes the team through all the stages of the Design Thinking process in an accelerated and enjoyable way.

Here are the instructions:

"Teams, you have 15 minutes to make a wearable that will solve a problem for a particular group of users. Get ready to demonstrate it in a catwalk and an elevator pitch which should include: Problem/Solution/ Benefit"

Play some music, get a catwalk going and follow the activity with a discussion about the design process.

Break the Ice AI-Prompts

Design engaging, purposeful openers with AI.

- *Given the workshop theme [insert], generate 5 creative icebreakers that connect directly to the topic.*
- *Suggest 3 inclusive activities that work equally well for in-person, remote, and hybrid teams.*
- *Adapt this icebreaker [insert] for a group of [number] participants with limited time and space.*
- *Create 5 playful but insight-generating icebreakers that also surface participants' assumptions about the challenge.*
- *Propose a sequence of 3 escalating warm-up activities to build trust and creative energy.*

2

Challenge
The Brief

The team has just received a challenge, a task, a problem to address. A good understanding of the complexity of the task is the first step to success. A good discussion at this stage aligns the team round the purpose.

Here are some questions to guide the discussion:

- *Why is it important to address it?*
- *What is some of the context of the challenge?*
- *What is the ultimate impact if you solve it?*
- *What constraints will you have while addressing the brief (business, design, technology, regulation)?*

Challenge The Brief (AI prompts)

Push beyond assumptions to reveal the true design opportunity.

- *Given this initial brief [insert], identify at least 5 assumptions or constraints we could challenge.*
- *Reframe the brief in 3 different ways: user-centred, system-centred, and future-focused.*
- *Propose provocative "What if…" questions to open up new solution spaces.*
- *List potential blind spots in the brief and suggest how to investigate them.*

3

Frame Wicked Problems

You have just taken on a complex problem, one with many issues, many stakeholders, many unknowns. Visualising the complexity helps the team to reflect upon, discuss, and think how to tackle it.

The following activity can help you visualise the complexity and decide on what you want to tackle first:

1. *As a team, brainstorm the issues, people, themes, barriers this topic brings to mind.*
2. *Express that through a Poster, a collage, a rich story.*
3. *Discuss and choose your focus.*

Wicked Problems (AI prompts)

Make complexity visible and find smart entry points.

- **Map the system**: *Given this challenge [insert], list key actors, issues, policies, incentives, and feedback loops*

- **Surface tensions:** *Identify 5 irreducible dilemmas and write one "How might we…" for each.*

- **Define boundaries**: *Propose 3 scopes (narrow, medium, wide) and the trade-offs of tackling each.*

- **Probe leverage:** *Suggest 5 "small changes, big impact" interventions with hypotheses to*

4

Choose Research Methods

Your team is likely to have used many exploration methods and tools. Having a quick inventory is a good way of building on the knowledge and skills of your team. Here are the instructions for the activity:

1. *Create a list of the methods and tools you are familiar with.*

2. *Feel free to choose from the list below or add your own:*

Interview/ Observation/ Immersion/ Lists/ Visualisation / Journeys/ Desk Research/ Call Listening /Focus Groups/ Workshops/ Data Analysis/ Surveys/ Prototypes/ Show and Tell/Affinity Maps/ Empathy Maps/ Problem Statement Definition…

Research Methods (AI prompts)

Select and adapt research methods with AI guidance.

- Given our challenge [insert], suggest the most relevant qualitative and quantitative methods.
- Propose a blended method approach to maximise insight depth and breadth.
- Identify innovative or less common research methods suited to our context.
- Suggest ways to adapt chosen methods for remote or hybrid research.
- Generate tips for sequencing methods for optimal learning.

5

Plan Research

Planning your research is a good step towards a great understanding of the people involved in the business context and the external factors.

1. *Lead the team through a discussion of what we know, what we assume, what we do not know.*

2. *Then plan how you are going to find out what you do not know or how you will validate your assumptions.*

3. *Who are you going to talk to? Where and when? That's your plan for the design research.*

4. *Visualise your Research Plan by using a MIndmap.*

Plan Research (AI prompts)

Design smarter, more targeted research plans with AI.

- *Given our challenge [insert], outline goals, methods, participants, and timeline.*
- *Suggest a mix of qualitative and quantitative methods to balance depth and breadth.*
- *Identify possible biases and propose mitigations.*
- *Suggest how to adapt the plan if time or budget is limited.*

6

Map Stakeholders

Every challenge has got people in it. Identifying who they are, how they are involved, impacted, related is a great way of setting the scene for your human-centred research.

Here is how you can lead the activity: As a team, brainstorm all the people who have a stake in the outcome of the challenge.

❶ *Map them according to importance/proximity/influence.*

❸ *Discuss relationships, dependencies, influences, who you need to interview, consult, involve, and when.*

Map Stakeholders (AI prompts)

Map influence and relationships more strategically with AI support.

- Given this project context [insert], list all possible stakeholders, including less obvious ones.
- Classify them by influence and interest levels, explaining why.
- Suggest ways to engage each stakeholder group effectively.
- Identify potential conflicts or alliances.
- Propose 3 creative ways to involve underrepresented stakeholders.

7

Explore Business Context

Understand the business context where this innovation is taking place:

- *How does the business operate?*
- *What processes and systems does the business have?*
- *How is work organised, people and organisational design*
- *What platforms (IT) do we have and how does data flow in it?*
- *Who are our partners and suppliers?*
- *What policies and regulations do we have?*

Explore Business Context (AI prompts)

Use AI to analyse the business landscape more quickly and broadly.

- *Summarise current market trends, competitors, and key drivers.*
- *Suggest 5–7 potential disruptors or shifts.*
- *Identify industry benchmarks and outlier cases.*
- *Generate stakeholder questions to clarify constraints and opportunities.*
- *Propose a visual framework linking user needs to business objectives.*

Explore External Context

Explore and Discuss the impact of Global trends and weak signals on your business:

Technology Trends like Moore's Law, Connectivity, Mobile, The Cloud

Demography Trends: 5 generations at work, The aging population, Arrival of Zeds

Societal Trends- Trust in institutions, Booms & Busts

Environmental Trends- Circular econmy, Climate Change, Water, Energy

Globalization- Emerging markets, 24/7 work

Explore External Context (AI prompts)

Scan technology, demography, society, environment, and globalisation for opportunity.

- ***Trend brief:*** *"For our space [insert], summarise key shifts across Tech, Demography, Societal trust/economy, Environment, Globalisation; include weak signals."*

- ***Second order effects****: "For each force, list 2–3 plausible ripple effects on user behaviour and business models."*

- ***Risk radar:*** *"Identify 5 strategic risks these forces introduce and propose a lightweight way to monitor each."*

9

Conduct user Interviews

You are preparing to go out and talk to people in order to understand their needs, aspirations, frustrations. Who will you interview to get different perspectives? Where will you find them? Any logistics? What questions will you ask in order to uncover their needs and aspirations?

Here are some tips:

- *Use open ended questions. / Use 5Whys. / Ask about real examples./Ask non-leading questions*
- *Listen!/ Try not to interrupt./ Try not to fill the silence./ Observe non-verbal cues.*
- *Capture direct quotes.*
- *Establish and maintain connection.*

Conduct User Interviews (AI prompts)

Design richer interviews with AI-generated questions.

- *Based on this challenge [insert], generate 10 open-ended interview questions.*
- *Suggest counterintuitive questions to surface hidden needs.*
- *Roleplay as the interviewee and answer authentically.*
- *Propose follow-up questions from hypothetical responses.*
- *Suggest activities to replace standard Q&A for deeper engagement.*

10

Immerse Yourself

Immersion is a method that helps you walk in the user's shoes. Here are some tips how to lead the team through it:

1. Discuss what stage in the service you will be immersed in, where and when you will go for it, risks involved, ethics of research.

2. Instruct people to go out in pairs and immerse in the experience; observe, take notes, photos, sketches, videos.

3. Capture your thoughts, frustrations, concerns on the go, as you experience them.

Immerse Yourself (AI prompts)

Dive deeper into the user's world with AI-assisted prompts.

- *Suggest environments or activities to immerse in.*
- *Generate a sensory checklist (sights, sounds, smells, touches).*
- *Propose role-play or simulation exercises.*
- *Recommend ways to document immersion insights.*
- *Suggest reflective post-immersion questions.*

AI

Observe Users

Observation is a key method for creating Empathy.

The process goes from concrete to abstract, from observing what is happening, and understanding how it is happening to inferring why it is happening. Check your assumptions with users.

Concrete → Abstract

WHAT	HOW	WHY
What is happening, what are people doing?	How are people going about it?	Why are people acting that way?

Observe Users (AI prompts)

Spot unseen patterns with AI-powered observation prompts.

- Suggest behaviours, objects, or interactions to focus on.
- Create a field note checklist.
- Predict patterns to watch for.
- Recommend visual mapping techniques.
- Suggest ways to synthesise observational data.

AI

Map Empathy

You went out and interviewed people. Time to make sense of the data you collected. Empathy Map is a great tool for that. Place a photo or sketch of your persona in the middle of a flipchart sheet. Divide the sheet into four sections and start downloading your notes.

Stand back, draw insights, frame problems.

What did she "say"?	What did she think?
What did she "do"?	What was she feeling?

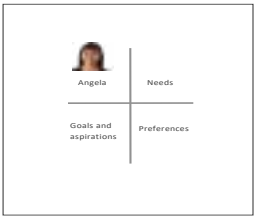
Map Empathy (AI prompts)

Uncover hidden insights by expanding empathy maps with AI.

- *Generate a full empathy map from persona description.*
- *Suggest unusual pains and gains.*
- *Roleplay a day in the persona's life.*
- *Suggest 5 opportunity areas.*
- *Generate probing interview questions for each quadrant.*

Build A Persona

A persona is a fictitional character that represents a group of people with similar needs. A Persona profile is based on research with real people. Here are a few tips how:



1. *Give your persona a name, place a photo*
2. *Add demographic attributes,*
3. *Add her aspirations, goals, fears, frustations, needs, concerns.*
4. *Add her preferences*

Build A Persona (AI prompts)

Generate richer, more nuanced personas with AI support.

- *Create 3 distinct personas with names, goals, pains, behaviours.*
- *Generate a day-in-the-life story.*
- *Suggest 5 unexpected interview questions.*
- *Brainstorm 10 features balancing desirability, viability, feasibility.*
- *Roleplay as this persona reacting to a product pitch.*

Map the User Journey

Mapping customer or user's experience is a great method to uncover insights and opportunities. You can use it when you want to understand the current "as is" journey or imagine a future "to be" scenario.

How to use:

1. *Choose the customer, user, or stakeholder journey you want to map.*
2. *Capture each stage, action, thought, and feeling in the current experience.*
3. *Spot pain points and delights — highlight where frustrations or successes occur.*

Map the User Journey (AI prompts)

Expand both "as is" and "to be" journeys with richer detail and possibilities.

- *Given our user [insert], generate a step-by-step map of their current ("as is") journey, including actions, thoughts, emotions, and pain points.*
- *Suggest hidden or overlooked touchpoints that might be missed in manual mapping.*
- *Generate future ("to be") scenarios that remove pain points and amplify delight.*
- *Recommend metrics to track at each stage of the journey for ongoing evaluation.*

AI

Create a shared Model

You went out, talked to people and gathered several perspectives on the challenge you are investigating. Time to make sense of it all. Building 3D models is a great way of externalising your thoughts and findings. You may use lego, pipe cleaners, plasticine, cardboard...

1. *Share the stories from the field with your team.*
2. *Build a 3D model which represents the current state of affairs. Indicate barriers.*
3. *Share the model. It is the story of the findings.*

Create a Shared Model (AI prompts)

Build common understanding through collaborative visualisation.

- *"Suggest 3 alternative visual frameworks (map, diagram, canvas) to represent the same information."*
- *"Highlight gaps or inconsistencies in the shared model and propose clarifying questions."*
- *"Generate example scenarios to test whether the model holds true in practice."*
- *"Propose ways to evolve the shared model as we learn more during the project."*

Analyse and Synthesise with Affinity Diagram

You interviewed people and collected data. Time to analyse and synthesise. ***Affinity diagram*** *is a great tool to help you do that. Here are some tips:*

1. *Download your notes into post-its, place them in a flipchart paper.*
2. *Share stories from the field with other members of the team.*
3. *Group them according to affinity. Write a heading for each cluster.*
4. *Stand back and frame the problems you uncovered.*

Analyse and Synthesise (AI Prompts)

Cluster ideas and insights more creatively with AI support.

- Suggest 5–7 thematic clusters and name them.
- Recommend unusual grouping criteria.
- Generate concise labels.
- Suggest connections between clusters.
- Provide probing questions for each cluster.

Draw Insights

After clustering data, building empathy maps, personas, and journey maps, it is time to ***draw insights. Insights*** *are patterns, surprises, or tensions uncovered during analysis that reveal something about users, systems, or contexts.*

An insight is not just a fact—it's the meaning behind the fact. Push teams to move from what they saw to why it matters. Use the Insight Canvas to move from "what you saw" to why it matters".

INSIGHT CANVAS

Observation (what we saw/heard)	Interpretation (what it might mean)	Insight (why it matters)
Example: "Users often skip reading instructions."	"Users may feel instructions are confusing or irrelevant."	"Users value speed over clarity, and will avoid anything that slows them down."

Draw Insights (AI prompts)

To help your team uncover insights, try these AI prompts:

- *"Here are clustered user quotes/observations: [paste notes]. What patterns, tensions, or surprises do you see?"*
- *"Reframe these observations as insight statements that reveal why they matter, not just what happened."*
- *"Generate 10 possible insights from this data, phrased as human-centered truths (e.g., 'Users believe…', 'People struggle when…')."*
- *"Which of these insights seem most impactful for defining new opportunities?"*

AI

Define Problem Statement

You looked at the data, clustered them, found patterns. Time to frame and re-frame the problems. This is a key moment in your design process. Here are some tips how to lead the team through this activity:

1. *Stand back and ask the question: What does our user really need?* (**Problem statement is about Needs not Objects/Features**)

2. *Write and re-write the statement until it really captures the real problem you uncovered.*

A good framing should have both the need and your insight, e.g **"She needs to communicate the value of design, so that the business understands and embraces it."**

Define Problem Statement (AI prompts)

Craft sharper, more inspiring problem statements with AI.

- *Craft sharper, more inspiring problem statements.*
- *Suggest statements that encourage radically different solutions.*
- *Rewrite focusing on emotion, behaviour, or systemic impact.*
- *Generate opposite or reframed statements.*
- *Evaluate against clarity, inspiration, and scope.*

Map Opportunities

Identify and prioritise the most promising opportunities for innovation. Use it after mapping the current ("as is") and future ("to be") journeys, or when you have many insights to organise.

How to use:

1. *Gather insights — collect pain points, delights, and ideas from journey maps, research, or testing.*
2. *Cluster themes — group similar insights to reveal opportunity areas.*
3. *Frame opportunities — rewrite clusters as "How might we…?" questions.*
4. *Prioritise — evaluate opportunities by impact, feasibility, alignment with goals and choose 2–3 opportunity spaces to explore further in ideation.*

Map Opportunities (AI prompts)

Prioritise opportunities in ways that spark bold solutions.

- *Suggest ways to cluster or categorise insights into broader opportunity areas.*
- *Propose prioritisation frameworks (impact vs. effort, desirability vs. feasibility).*
- *Generate extreme or "wild card" opportunity statements to spark breakthrough ideas.*
- *Recommend 2–3 opportunity areas that balance quick wins with long-term innovation.*

AI

Frame Opportunity Statement

*Every problem is an opportunity for design. Turning the problem statement into an opportunity statement is your next step towards finding solutions. The "**How Might We**" question is a good formula for an opportunity statement:*

1. *Look at the problem statement and turn it into a question that starts with "How might we....*

2. *Version and reversion the "How might we...", so that it is neither too narrow nor too broad.*

A good opportunity statement opens the space for a lot of solutions.

Frame Opportunity Statement (AI prompts)

Frame opportunities in ways that spark bold solutions.

- *Draft 5 "How might we…" statements varying scope and approach.*
- *Frame from different stakeholder perspectives.*
- *Generate extreme or unconventional statements.*
- *Reframe focusing on emotional, functional, or systemic aspects.*
- *Propose quick validation questions.*

AI

DIVERGENT THINKING

CONVERGENT THINKING

DIVERGENT THINKING

1. Shift Gears
2. Use Ideation techniques
3. Energise the Team
4. Set Ground rules
5. Brainstorm Ideas
6. Brainwrite Ideas
7. Reverse Solutions
8. Ask: “What if? “
9. Sketch with Crazy 8s
10. Select promising Ideas
11. Prioritise using Grid
12. Create a concept
13. Exchabge Feedback
14. Choose Prototype Types
15. Apply Prototype Techniques
16. Test with Users
17. Test the Concept
18. Iterate the prototype
19. Co-iterate with Users
20. Run a Design Sprint

CONVERGENT THINKING

Guide for Facilitators – Imagine Stage

Generating, shaping, and testing ideas

The Imagine Stage helps teams unlock creativity, develop ideas, and test them fast with users. The flow balances divergence and convergence: go wide to explore possibilities, then narrow to focus on the most promising concepts.

Flow Overview

Shift Mindsets - create energy & set rules for ideation.

Generate Ideas- produce a wide range of options.

Select Ideas – filter and prioritise.

Create Concepts – make ideas tangible.

Prototype & Test – experiment, refine, and learn with users.

Facilitator Reminders

- Push for quantity before quality in early stages.
- Use ground rules and energisers to keep energy high.
- Remember: prototypes are learning tools, not finished products.
- Keep users in the loop – co-create, test early, and refine.

Guide for Facilitators – Imagine Stage

1. Shift Mindsets-Prepare the team for creativity.

- Shift Gears – signal the move into creative mode.
- Run an Energiser – energise and loosen the group.
- Set Ground Rules – align on how to ideate together.

2. Generate Ideas (Diverge)

- Apply Ideation Techniques – pick methods to spark creativity.
- Brainstorm Ideas – generate freely within constraints.
- Brainwrite Together – brainwriting for inclusivity.
- Reverse the Solution- reverse assumptions to provoke insight.
- Ask "What If?" – unlock bold, imaginative scenarios.
- Sketch Crazy 8s – rapid sketching for volume.

3. Select Ideas (Converge)

- Select Promising Ideas – shortlist collaboratively.
- Use a Priority Grid – apply clear criteria for focus.

4. Create Concepts

- Create a Concept – combine and frame ideas into proposals.
- Exchange Feedback – refine concepts through quick loops.

5. Prototype & Test

- Choose Prototype Types – pick low/high fidelity as needed.
- Apply Prototype Techniques – role-play, paper, digital, etc.
- Test the Concept – validate in more depth.
- Run Tests – gather quick user reactions.
- Iterate Ideas – improve through cycles of feedback.
- Co-iterate with Users – refine with active user input.
- Run a Design Sprint – compress into a rapid innovation cycle.

1

Shift Gears

Switch mental gears to boost creativity and fresh thinking.

You have brought a group of people together to generate lots of ideas. Here are some tips on how to facilitate the session:

1. *Welcome and excite the team on the purpose of the session and what you expect to do with those ideas.*
2. *Use a warm up activity to shift mind gear. People have most likely been in their analytical mode until then.*
3. *Remind them of Ideation ground rules.*
4. *Split the team into subteams of maximum 4 people. Give each team the HMW question.*

Enjoy and Celebrate at the end!

Shift Gears
(AI prompts)

Switch mental gears to boost creativity.

- Suggest 5 short energising activities to shift from analytical to creative thinking.
- Given our workshop theme [insert], design a 3-minute gear shift exercise that ties directly to the topic.
- Propose alternative “reset” activities for in-person, remote, and hybrid groups.
- Generate 3 “perspective-shift” prompts that push participants to see the problem in a new way.
- Create a playlist of 5 songs that set a

2

Run an Energiser

Boost group energy and readiness for creative work.

Energisers are short, playful activities that reset the team's energy, spark creativity, and strengthen group connection.

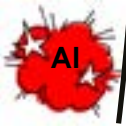
Here are a few tips on how to use energisers:

1. Use at the start of a session, after breaks, or whenever energy dips.
2. Keep it short and snappy (3-10 min).
3. Choose activities that are inclusive, fun, and safe for all participants.
4. Link the energiser (lightly) to the workshop theme, so it warms up creative muscles without feeling random.

Run an Energiser (AI prompts)

Build energy, trust, and creative readiness.

- *Suggest 5 energisers tailored to a group size of [insert number].*
- *Propose inclusive energisers that work across cultures.*
- *Create 3 themed energisers linked to our challenge context.*
- *Recommend quick energisers for mid-session fatigue.*
- *Suggest reflection questions after the energiser to connect it to the work ahead.*



3

Set Ground Rules

Whatever ideation techniques you use, you need some ground rules to go by. I hear you asking "why"? Ground rules create a safe space where every one feels confident to share ideas.

In ideation, quantity and openness matter more than polish or feasibility. By agreeing on simple rules, the team unlocks creativity, reduces fear of criticism, and ensures all voices are heard.

Here's a list:

- Defer judgment- no idea is too wild in the moment, stretch beyond the obvious.
- Stay Focused on topic- keep ideas tied to the challenge.
- Go for quantity- the more the better.
- Build on the ideas of the group- use "yes..and".
- One conversation at a time- listen actively.
- Have fun. Enjoy!

Set Ground Rules (AI prompts)

Set the tone for productive, respectful collaboration.

- ***Tailored Rules:*** *"We're running an ideation workshop with [describe participants: e.g., engineers, executives, students]. Suggest 8 ground rules that balance creativity with psychological safety."*
- ***Remote Workshops:*** *"What ground rules help creativity in online brainstorming sessions, where participants use Miro or MURAL?"*
- ***Culture Fit:*** *"Reframe classic brainstorming ground rules in a tone that fits [playful / professional / startup / academic] environments."*
- ***Short List:*** *"Give me a condensed set of 4 memorable ground rules we can put on the wall to guide our brainstorming."*

3

Apply Ideation Techniques

Use structured methods to spark a wide range of ideas.

There are many techniques you can use in order to come up with lots of ideas.

Here are a few you may try out with your team:

- Brainstorming
- Brainwriting
- Crazy 8s- as used by Google Sprints
- Reverse solution
- Stormboard- a virtual Brianstorm platform
- What if? scenarios

Apply Ideation Techniques (AI prompts)

Expand idea generation beyond the usual methods.

- *Based on our challenge [insert], suggest 5 ideation methods suited to small/large groups.*
- *Recommend methods that push divergent thinking in unexpected directions.*
- *Adapt a traditional technique for remote collaboration.*
- *Generate an agenda that combines 2–3 techniques for maximum output in 30 minutes.*

5

Brainstorm Ideas

Brainstorming is a fast, collective way to generate a wide range of ideas in a short time. By encouraging quantity, suspending judgment, and building on one another's contributions, teams unlock unexpected solutions that no single person could have imagined alone.

Top Tips:

1. Clearly state the problem, the opportunity in a concise "How might we…?" format.

2. Give the group a fixed time (e.g., 15–30 minutes. Set a bold target (e.g., "Let's aim for 100 ideas in 20 minutes") to push for volume.

3. Capture every idea, enforce ground rules, and keep pace lively.

Brainstorm Ideas (AI Prompts)

Expand your idea pool and uncover unexpected directions.

- "Generate 20 brainstorming prompts for the challenge: [insert your problem]. "
- "Suggest 10 brainstorming prompts for [insert challenge], but each idea must work under these constraints: [e.g., zero budget, only one day to implement, must use existing technology]."
- "How would [teachers / athletes / children / a competitor] brainstorm solutions to this challenge?"

6

Brainwrite Together

Brainwriting gives everyone an equal voice by having participants write down ideas individually before sharing. Unlike verbal brainstorming, it reduces group pressure, prevents louder voices from dominating, and creates space for introverts to contribute their best thinking.

By collecting ideas silently and then building on each other's written thoughts, teams generate a broader and more diverse set of solutions. How to run is:

1. Place the "How might we..." question in the center of a flipchart.

2. Individually write 8 ideas in 8 minutes. Write one idea per post-it.

3. Circulate the ideas in your team and build on them or be triggered to come up with a few more ideas.

Brainwrite Together (AI prompts)

Capture diverse ideas quietly before group discussion.

- *Based on our challenge [insert], generate 5 BrainWriting DESIGN CONSTRAINTS to spark ideas.*
- *Suggest variations for remote BrainWriting sessions.*
- *Propose time limits and rotation patterns to maximise idea flow.*
- *Recommend ways to cluster and discuss BrainWriting outputs.*

7

Reverse the Solution

Reverse Solutions flips the problem on its head: instead of asking "How do we solve this?", the team explores "How could we make this problem worse?"

This playful inversion lowers the pressure to be right, sparks laughter, and often surfaces hidden assumptions. Once the "bad" solutions are on the table, flipping them back around reveals fresh, unconventional ideas that would otherwise stay hidden.

1. *Start with " how could we make it worse?"*
2. *Brainstorm as many answers to the questions posed as possible.*
3. *After generating "bad" or "reverse" solutions, ask the team: What's the opposite of this? How could this actually help us?*
4. *Assess your solutions. Are any of the ideas viable?*

Reverse the Solutions (AI prompts)

Break habitual thinking by flipping the problem.

- *Rewrite our problem as "How might we make it worse?" and generate 10 bad solutions.*
- *Flip each bad solution into a potential good idea.*
- *Suggest unusual problem inversions to try.*
- *Recommend ways to combine reversed solutions into fresh concepts.*
- *Propose criteria for spotting promising ideas from reversals.*

8

Ask: “What If?”

“What if?” scenarios spark imagination by inviting the team to suspend reality and explore possibilities without limits.

By asking bold, hypothetical questions — “What if money was no object? What if users had superpowers? What if our product had to work in space?” — teams push beyond constraints and uncover radically new directions.

After wild ideas emerge, ask ***“How could we adapt this to reality?”*** *to translate imagination into usable concepts.*

This method is powerful for unlocking fresh perspectives, especially when current ideas feel too safe or incremental.

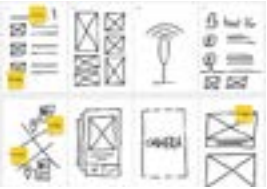
Ask "What If?" (AI prompts)

Unlock imagination with provocative scenarios.

- Generate 10 "What if…" questions that challenge our assumptions.
- Create extreme and playful "What if" prompts to stretch thinking.
- Suggest ways to connect "What if" scenarios back to real constraints.
- Propose follow-up activities to explore feasibility.
- Generate visual metaphors to express the wildest "What if" ideas.

Sketch Crazy 8s

A rapid ideation exercise where each participant sketches 8 distinct ideas in 8 minutes. The speed forces participants to push past their first, obvious concepts and tap into more unexpected, creative solutions.



1. *Fold an A4 sheet into 8 sections.*
2. *Set a timer for 8 minutes.*
3. *Draw one idea per section — no words needed, just quick sketches.*
4. *Share and discuss the ideas to spot patterns or promising directions.*

Sketch Crazy 8s (AI prompts)

Rapidly sketch multiple solutions.

- *Suggest eight different angles or variations on our challenge: [insert challenge].*
- *Propose "constraint flips" (e.g., opposite user, extreme budget, no tech) to stretch thinking.*
- *Generate prompts to push beyond safe ideas into wild or provocative territory.*
- *Recommend how to cluster and name ideas after the exercise.*
- *Suggest adaptations of Crazy 8s for remote or digital collaboration.*

10

Select Promising Ideas

The team have come up with many ideas, first individually, then building on the ideas of each other, stretching them, going beyond the obvious. Time to Identify two or three opportunity spaces.

Here are a few tips:

1. *Organise the ideas into buckets, e.g new products, new service, environment, behaviour....*

2. *Look for further combinations, associations.*

3. *Select a few and work on them, stretch them further, turn them into Concepts.*

Select Promising Ideas (AI prompts)

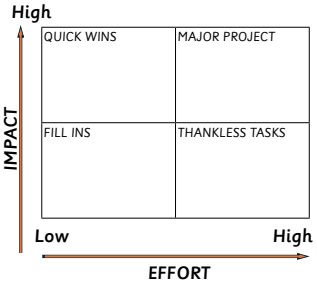
Choose the most promising concepts to develop further.

- *Propose 3 quick selection methods for narrowing a long idea list.*
- *Suggest criteria balancing desirability, feasibility, viability, and sustainability.*
- *Given our shortlist [insert], score each idea against these criteria.*
- *Recommend methods to involve users in the selection process.*
- *Suggest a "wildcard" idea to keep in the mix for inspiration.*

Prioritise with 2x2 Grid

A 2x2 grid is a simple but powerful way to evaluate and prioritize ideas based on two chosen criteria. Common pairs include impact vs. effort, desirability vs. feasibility, or short-term vs. long-term benefit.

This visual approach makes decision-making clearer, reduces debate, and helps the group move from a long list of options to a focused set of priorities.



- Choose Criteria with Care: Ask, "What really matters for this project?"
- Name the Quadrants: This makes the grid easier to interpret and act on.

Prioritise with 2x2 Grid (AI prompts)

Visualise idea impact versus effort.

- Based on our ideas [insert], place them on a 2×2 priority grid (Impact vs. Effort).
- Suggest 3 alternative axes for evaluating ideas (e.g., Speed to Market, Learning Potential).
- Propose conversation prompts for each quadrant to ensure balanced discussion.
- Recommend ways to revisit and update the grid as assumptions change.
- Suggest follow-up actions for high-impact/ high-effort ideas.

AI

Create A Concept

You are now taking an idea from a post-it note and developing it very quickly into a rough concept. Use the ***concept poster template*** *addressing four questions:*

Your idea-solution in one	
How will it	**Draw your idea here**
What benefits will	

❶ *Explain solution in one sentence.*
❷ *Describe how it will work. (key things, no details)*
❸ *Who are people impacted/involved?*
❹ *How will this solution solve the problem?*

And visualise it!

Create A Concept (AI prompts)

Turn rough ideas into clear, shareable concepts.

- *Given an idea [insert], create a one-page concept summary including title, user need, key features, and benefits.*
- *Suggest ways to visually represent the concept for quick understanding.*
- *Generate 3 variations of the concept for different user segments.*
- *Identify possible risks and unknowns for each variation.*
- *Propose questions to test with users before*

Exchange Feedback

You created several concepts. Time to share and get some feedback. Take them to members of your team first then out there with some real customers.

Remember you are there to get honest feedback, not to sell the concept, (not yet).

Key questions to guide the feedback:

1. *What works?*
2. *What can be improved?*
3. *Any questions?*
4. *Any suggestions?*

Exchange Feedback (AI Prompts)

Exchange constructive input to strengthen ideas.

- Generate 5 feedback prompts using the "I like, I wish, What if" framework.
- Suggest methods for collecting feedback anonymously and in real time.
- Propose ways to reframe negative feedback into actionable insights.
- Recommend how to balance feedback from users, team members, and stakeholders.
- Suggest a structured debrief activity to turn feedback into clear next steps.

AI

Choose Prototype Types

Choose the right fidelity and format for each learning goal.

There are several types of prototypes from rough and ready to high fidelity ones:

- **Rough and Ready prototypes.** *Using pen and paper, pipe cleaners, lego, plasticine, cardboard, makes it possible to test your solution very early on and iterate many times, very quickly.*

- **Live prototypes.** *After many rough prototypes, it is time to test your idea in real market conditions to find out how viable and feasible it is. It can run for a few days or weeks.*

- **Pilots** *are the next stage, where you bring the whole system to market and try it out for a few months in real conditions.*

Choose Prototype Types (AI Prompts)

Use AI to enhance your concept testing process.

- *Given our objective [insert], recommend suitable prototype types (e.g., paper, digital, role-play).*
- *Suggest the minimal level of fidelity needed to answer our question.*
- *Propose creative prototype formats beyond the obvious.*
- *Recommend how to combine multiple prototype types in one test.*
- *Suggest ways to reuse or adapt prototypes for future tests.*

Apply Prototype Techniques

There are many prototype techniques that can help you create from rough and ready to live high fidelity models. First decide what to prototype and why, then select a technique:

- *Draw, sketch, build.*
- *Digital mock-ups for people-tech interactions*
- *Journey mapping for key moments of the experience*
- *Storyboard*
- *Role play for people-people interactions*
- *3D models*

Apply Prototype Techniques (AI Prompts)

Use practical methods to bring ideas to life quickly.

- *Based on our concept [insert], suggest step-by-step instructions for making a low-cost prototype.*
- *Recommend tools and materials for different prototype types.*
- *Propose time-saving hacks for building under tight deadlines.*
- *Suggest how to make prototypes interactive for richer feedback.*
- *Recommend a checklist for preparing prototypes for testing.*

Test the Concept

Validate whether the overall idea (value proposition, business model, positioning) resonates before investing heavily in prototyping.

Key considerations:

- *Focus on the concept itself, not yet the details of execution.*
- *Use concept boards, mock ads, pitch decks, or landing pages.*
- *Gather early signals of interest, relevance, and willingness to engage/pay.*

Test the Concept (AI Prompt)

- Suggest lightweight ways (e.g., mock ads, concept boards, pitches) to validate interest, relevance, and willingness to pay."

Help me test an early concept with potential users before I build a prototype.

- Suggest key questions to answer in the first round of testing.

- Suggest how to adapt the concept based on test feedback.

Test with Users

There is no better testing than with real people, in the real world, in order to find out what works, what doesn't, what needs changing.

To quickly check how people interact with a prototype and uncover usability, desirability, and feasibility issues:

1. *Focus on real interactions with even rough prototypes.*
2. *Observe behaviours, not just opinions.*
3. *Use feedback loops to spot what works and what blocks adoption. Quickly validate assumptions with low-cost experiments*

Test with Users (AI Prompts)

Gather evidence from real users to improve the solution.

- *"Help me design a quick user test for my prototype. The goal is to learn about desirability, usability, and feasibility.*
- *Suggest simple ways to capture both what users say and how they behave."*
- *Suggest a test plan covering participants, method, and success criteria.*
- *Propose ways to capture both qualitative and quantitative feedback.*
- *Propose a synthesis framework for test findings.*

Iterate the Prototype

Improve your concept by learning from feedback and making quick adjustments. You use it after testing a prototype or concept, when you have new insights to build on.

How to use:

1. ***Review feedback*** — *capture what worked, what didn't, and surprises.*

2. ***Spot patterns*** — *look for common themes across different testers.*

3. ***Prioritise changes*** — *choose the most critical improvements to make first.*

4. ***Revise quickly and test again*** — *adjust the prototype or concept without over-polishing and put the updated version back in front of users to validate improvements.*

Iterate the Prototype (AI Prompt)

Accelerate learning cycles and explore multiple refinements quickly.

- *Given our prototype [insert], suggest 5–7 possible improvements based on common feedback themes.*
- *Propose variations of the concept that target different user segments.*
- *Generate quick "what if" scenarios to explore bold or unconventional changes.*
- *Suggest ways to prioritise iterations based on impact vs. effort.*
- *Rewrite our user journey incorporating the new iteration for clarity.*

Co-iterate with Users

You have made some prototypes, received some feedback, it is time to iterate. Why not bring in some users and lead a workshop. Here are some facilitation tips:

1. *Brief the users where you are in the process and show appreciation for their participation.*
2. *Be open to new ideas and let them know about that.*
3. *Be prepared to move from your initial ideas, however hard it feels at times.*
4. *Be prepared to try out the ideas in the next iteration.*

Co-iterate with Users (AI Prompts)

Use these AI Prompts to Refine solutions collaboratively with end users:

- Propose structured co-creation sessions for specific design challenges.
- Suggest activities that encourage users to sketch or prototype their own ideas.
- Recommend ways to integrate user feedback in real time.
- Suggest tools for remote co-iteration workshops.
- Propose reflection questions to deepen user involvement.

Run a Design Sprint

You have identified a few strategic opportunities. Gather a team and run a Design Sprint. Engage customers throughout the process:

❶ **Explore:** *Empathise and Define the problems. Frame and reframe them. Prioritise the problems to carry through to the next stage.*

❷ **Imagine**: *Ideate lots of solutions and select a few. Turn them into rough concepts.*

❸ **Implement**: *Prototype rough and fast, test, get feedback, iterate. Pull it all together using the BMC.*

❹ **Tell the story**: *Pitch for success.*

Run a Design Sprint (AI Prompts)

Compress the design process into focused, time-boxed effort.

- Outline a 5-day sprint plan tailored to our challenge.
- Suggest adaptations for a 3-day or 1-day mini-sprint.
- Propose activities for each sprint day to maximise learning.
- Recommend roles and responsibilities for sprint team members.
- Suggest how to integrate sprint outcomes into ongoing work.

DIVERGENT THINKING

CONVERGENT THINKING

Implement Stage
List of Cards

1. Identify Assumptions
2. Frame Hypotheses
3. Plan Experiments
4. Set up Experiments
5. Test Desirability
6. Test Feasibility
7. Test Viability
8. Test Sustainability
9. Apply Business Lenses
10. Design a Go-to-market Strategy
11. Map a Business Model Canvas
12. Map a Value Proposition Canvas
13. Design with the 4P Model
14. Design with the 4C Model
15. Build a Service Blueprint
16. Test the Whole System
17. Run Pilots
18. Launch the Solution
19. Scale the Solution
20. Select your S caling Path

Guide for Facilitators – Implement Stage

Turning tested ideas into sustainable impact

The Implement Stage moves from promising concepts to market-ready solutions. It balances experimentation, testing, and business design with a focus on scaling responsibly.

The flow is logical but not rigid — teams may enter at any point or loop back depending on their challenge.

Flow Overview

Frame Assumptions & Hypotheses

Design Experiments

Test Through Lenses

Build Business Foundations

Integrate & Pilot

Launch & Scale

Facilitator Reminders:

- *De-risk early: Encourage starting with assumptions and tests*
- *Evidence is Gold: Capture and share what worked, what didn't, what's next. Every card should leave behind proof.*

Facilitator Playbook – Implement Stage

1. Frame Assumptions & Hypotheses
- Identify Assumptions (desirability, feasibility, viability, sustainability).
- Frame Hypotheses (turn beliefs into testable statements).

2. Design Experiments
- Plan Experiments (define success metrics & criteria).
- Set Up Experiments (design lean tests; pivot, persevere, or pause) .

3. Test Through Lenses (capture evidence from each test)
- Desirability- Do people want it?
- Feasibility - Can we build and deliver it?
- Viability - Is it financially sustainable?
- Sustainability -Will it endure responsibly? Include risks & unintended consequences.
- Apply Business Lenses -People, Processes, Platforms, Financials, Policy, Location.

4. Build Business Foundations
- Design a Go-to-Market Plan.
- Map the Business Model and Value Proposition Canvases.
- Design with the 4P Model.
- Design with the 4C Model
- Build a Service Blueprint.

5. Integrate & Pilot
- Test the Whole System (validate fit & refine).
- Run Pilots (real-world trials, collect evidence).

6. Launch & Scale Responsibly
- Launch the Solution (story + evidence).
- Scale the Solution (resources & partnerships).
- Select Scaling Path (scale up, scale deep, scale out) .

1

Identify Assumptions

The team needs to make explicit the risks that might prevent your innovation working. So far, you have been testing assumptions about the needs, the concepts and the main customer segment.

Time to go wider, identify assumptions that are crucial for the plan before you make investments in product development and the supporting infrastructure.

Identifying assumptions and articulating them will reduce the risks going ahead.

1. *Surface and categorise key assumptions before acting.*

2. *List assumptions you are making about: Customers/Business/Technology/ Sustainability.*

Identify Assumptions (AI Prompts)

- *Given our concept [insert], list assumptions across desirability, feasibility, viability, and sustainability.*
- *Suggest a method to rate each assumption by risk and uncertainty.*
- *Propose quick ways to test the riskiest assumptions first.*
- *Generate questions to uncover hidden or unconscious assumptions.*
- *Suggest a visual map linking assumptions to evidence gaps.*

2

Frame Hypotheses

HYPOTHESIS is an instrument you use to prove or refute your assumptions. You have identified key assumptions. Frame them as Hypotheses.

The hypothesis includes 3 key elements:
1. The **TARGET CUSTOMER**
2. The **FEATURE/SOLUTION** you need to test
3. The **VALIDATION,** the benefit it will bring to the user, the business and the society.

Here's an example:
We believe that: (Target customer) Coffee drinkers on the go, will find **(Feature/Solution)** recycling pods easy and convenient to use, **(Validation)** enabling us to collect good quality cups to recycle, increasing recycling rates by 20%.

A well written Hypothesis is Human Centric, Explicit, and Testable.

Frame Hypotheses (AI Prompts)

Copy and paste each of the following AI prompts in ChatGPT or any other AI you use:

- Given our assumptions [insert], write clear "If… then…" hypotheses.
- Suggest how to frame hypotheses for user behaviour, technical feasibility, and market adoption.
- Propose 3–5 bold hypotheses that could radically change our approach.
- Recommend metrics for validating or invalidating each hypothesis.

AI

3

Plan Experiments

Prepare and organise the resources, people, and processes needed to run your experiments smoothly. You need this after ou've designed your experiment plan and are ready to move into action.

How to use:

❶ **Objectives and Metrics :** *revisit what you're testing and why. Define what success looks like before you test.*

❷ **List requirements**: *tools, materials, locations, participants, permissions.*

❸ **Assign roles**: *larify who is responsible for each task.*

❹ **Schedule and sequence**: *set timelines for set-up, execution, and follow-up.*

Plan Experiments (AI Prompts)

Move from experiment design to execution with clarity and precision.

- *Given our experiment plan [insert], generate a step-by-step checklist to prepare resources, tools, and participants.*
- *Suggest ways to recruit and brief participants to ensure relevant, unbiased feedback.*
- *Propose methods for collecting data consistently across multiple trials.*
- *Recommend backup plans for common experiment disruptions or failures.*
- *Generate templates for recording observations, metrics, and learnings in real time.*

AI

4

Set up Experiments

To set up experiments, you need decide which hypotheses you are going to test.

Depending on the nature of the hypothesis, you can choose the type of tests you are going to run and how you will measure and assess the results from the test.

For example:

(Hypothesis) *We believe this platform will make it easy for colleagues to access information in a timely fashion.*
(Type of experiment) *We will run 121 testing sessions with 8 colleagues next week.*
(Validation) *We will know the hypothesis is true if 80% of the colleagues, we tested with, say that the plaform fulfil their needs.*

Set up Experiments (AI Prompts)

- *Design targeted tests to validate assumptions and reduce risk.*
- *Given our concept [insert], list the top 5–7 assumptions we must validate before launch.*
- *Suggest experiment formats for each assumption (e.g., landing page test, prototype trial, role-play, A/B test).*
- *Recommend timelines, participant profiles, and sample sizes for credible results.*
- *Propose metrics and success thresholds for each experiment.*
- *Identify the fastest, lowest-cost way to get actionable data for each test.*

AI

5

Test Desirability

Assess whether your solution is appealing and relevant to the target audience.

How to run it:

1. ***Prototype the experience***: *Use mockups, storyboards, or role-play.*

2. ***Engage real users:*** *Gather direct feedback on interest and emotional response.*

3. ***Observe behaviour***: *Look for excitement, confusion, or disinterest.*

4. ***Refine***: *Adjust based on what resonates most.*

Tips:

- *Ask: What would you miss if this disappeared?*

Test Desirability (AI Prompts)

Gauge whether your target customers truly want your solution.

- *Identify 5–7 assumptions about user preferences and behaviours to test.*
- *Suggest quick validation methods (smoke tests, fake-door pages, ad campaigns).*
- *Propose interview and survey questions that reveal emotional driver.s*
- *Generate variations of the concept to compare user appeal.*
- *Recommend ways to track and measure interest before launch.*

AI

6

Test Feasibility

Determine if your solution can be delivered effectively with available resources and technology.

How to run it:

1. **Break down components**: *Identify all critical parts of the solution.*

2. **Assess capability**: *Compare requirements with current resources.*

3. **Test at small scale**: *Run a pilot to check operational success.*

Tips:

- *Involve technical and operational experts early in testing.*

Test Feasibility (AI Prompts)

Assess whether your concept can be built and delivered reliably.

- *List 5–7 key technical or operational assumptions to validate.*
- *Suggest small-scale prototypes or proof-of-concept builds to test constraints.*
- *Identify potential technology, supply chain, or skills gaps.*
- *Recommend partnerships or resources to increase feasibility.*
- *Propose fallback options if a core element proves unworkable.*

AI

7

Test Viability

Validate whether your solution can generate enough value to sustain itself financially.

How to run it:

1. ***Identify revenue streams***: *Define how the solution will make money.*

2. ***Estimate costs:*** *Include production, delivery, and maintenance.*

3. ***Run financial scenarios***: *Test best-case, worst-case, and realistic cases.*

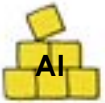
Tips:

- *Compare results to market benchmarks for similar solutions.*

Test Viability (AI Prompts)

Assess whether your concept can succeed in the market and sustain itself.

- *Given our concept [insert], identify 5–7 key financial and market assumptions to validate.*
- *Suggest 3 quick, low-cost experiments to test pricing sensitivity.*
- *Generate competitor analysis highlighting potential differentiators and gaps.*
- *Propose 5 key metrics (e.g., CAC, LTV, churn rate) to track from day one.*
- *Recommend ways to simulate demand before launch (landing pages, pre-orders, smoke tests).*



8

Test Sustainability

Ensure your solution is environmentally, socially, and ethically responsible over the long term.

How to run it:

1. **Assess impact**: *Look at environmental footprint and community effects.*
2. **Map life cycle**: *From sourcing to disposal.*
3. **Engage stakeholders**: *Get feedback from those affected.*
4. **Risks & Ethics:** *Uncover unintended consequences this solution might create and how to mitigate them.*

Test Sustainability (AI Prompts)

Evaluate long-term environmental, social, and ethical impacts of your concept.

- *Given our concept [insert], list 5–7 key sustainability assumptions to validate.*
- *Propose quick tests or research methods to assess environmental footprint (materials, energy, waste).*
- *Suggest metrics for social impact (community benefit, inclusivity, fair labour).*
- *Identify potential regulatory or certification requirements for sustainable operation.*
- *Generate 3 alternative concept adjustments to improve sustainability without losing core value.*

AI

9

Apply Business Lenses

Examine your proposal's impact across key areas of the organisation. What to consider:

***People**: Roles, skills, morale, recruitment, training.*

***Processes:** Workflows, efficiency, dependencies, bottlenecks.*

***Platforms:** Technology systems, tools, integration requirements.*

***Financials:** Costs, revenue streams, ROI, budget alignment.*

***Policy & Regulations**: Compliance, governance, legal constraints.*

***Location**: Physical space, geography, remote vs. on-site needs.*

Engage relevant stakeholders for feedback on their specific lens. Summarise findings to guide refinement or decision-making.

Apply Business Lenses (AI Prompts)

Evaluate your proposal from multiple organisational perspectives.

- *Given our concept [insert], list 3–5 potential impacts in each of these areas: People, Processes, Platforms, Financials, Policy/ Regulations, Location.*
- *Propose targeted questions to ask stakeholders in each category.*
- *Suggest quick validation activities (e.g., simulations, pilot runs, stakeholder interviews) for high-risk areas.*
- *Identify possible unintended consequences in each lens and propose mitigation strategies.*
- *Recommend ways to visually map trade-offs across all business lenses for decision-making.*

10

Design a Go To Market Strategy

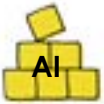
GO-TO MARKET(GTM) *is a strategic planning and communication instrument. It helps you think ahead and facilitates communication and alignment between you, the product team, the sales team, and company executives*

There are several instruments to help you:

1. **The Business Model Canvas.**
2. **The 4P model** (Product/Price/Promotion, Place).
3. **4Cs of marketing model:** Consumer wants, Cost to satisfy, Convenience of buying, Communication.
4. **The Blueprint**- A collaborative tool that connects the customer experiences with employee and support processes.

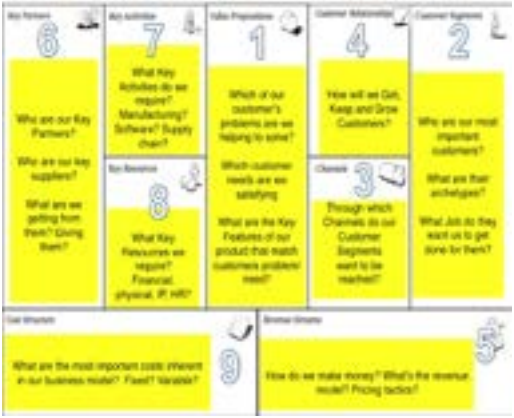
Design a Go To Market (AI Prompts)

- *Generate a go-to-market plan including positioning, pricing, and promotion.*
- *Suggest launch channels based on target audience behaviour.*
- *Recommend early adopter outreach strategies.*
- *Propose launch-day activation activities.*
- *Suggest post-launch tracking metrics.*



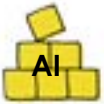
Map a BMC

Map the key building blocks of your business model. Populate each BMC section based on your concept



Map a BMC (AI Prompts)

- *Visualise and stress-test your business model with AI support.*
- *Given our concept [insert], populate each of the 9 blocks with 3–5 bullet points.*
- *Suggest alternative revenue streams or pricing models we might explore.*
- *Identify potential gaps or contradictions between blocks (e.g., cost structure vs. key activities).*
- *Propose 2–3 unusual partner or channel ideas to expand reach.*



Map a VPC

Value Proposition Canvas (VPC) is an instrument that makes the user problems and needs visible and tangible. It has two sides: The Customer Segment and the Value Proposition.

Customer Segment defines customer's needs.

Pains -what hinders the fulfillment of the jobs.

Gains- desired advantages for the user in fulfilling the jobs.

Value Proposition -what fulfills the user's jobs.

Pain relievers -how product/service can solve the problems of customers.

The gain creators -how product and service creates benefits.

Map a VPC (AI Prompts)

- *Given our target segment [insert], fill in the customer profile (Jobs, Pains, Gains) using 10+ examples per section.*
- *Suggest product/service features that address the top 3 pains and create the top 3 gains.*
- *Identify mismatches between customer needs and our current offer.*
- *Generate extreme or unconventional value propositions to spark new thinking.*
- *Create 3 alternative propositions tailored to different customer personas.*

AI

Design with The 4P Model

The 4P model (Product, Price, Place, Promotion) helps teams translate ideas into market-ready strategies.

It forces consideration of not just the offering itself, but also how it will be positioned, priced, delivered, and communicated to customers. This ensures solutions are not only desirable, but also commercially viable.

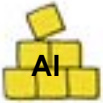
How to run it:

1. **Product**: *Clarify the features, benefits, and unique selling proposition.*
2. **Price:** *Decide the pricing strategy (premium, penetration, value-based, etc.).*
3. **Place**: *Determine distribution channels (online, retail, direct).*
4. **Promotion**: *Plan how you'll communicate the offer to the market.*

Design with the 4P Model (AI Prompts)

Use these AI prompts to refine your go-to-market strategy.

- *Given our concept [insert], propose 3–5 options for each P: Product, Price, Promotion, Place.*
- *Suggest innovative pricing strategies aligned with our target customer segment.*
- *Generate unconventional promotion ideas that fit our brand voice and budget.*
- *Recommend distribution channels, both traditional and digital, that reach our audience effectively.*



Design with The 4C Model

The 4C model (Customer needs, Cost to satisfy, Convenience, Communication) reframes marketing from the customer's perspective.

By focusing on what people want, how much they're willing to spend, how easy it is to access, and how they prefer to hear about it, teams design solutions that resonate more deeply and sustainably with users.

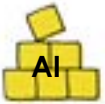
How to run it:

1. **Consumer Wants**: Define what customers truly need and desire.
2. **Cost to Satisfy:** Understand total cost from the customer's viewpoint.
3. **Convenience**: Make it easy to find, buy, and use the product.
4. **Communication**: Build two-way engagement rather than one-way promotion.

Design with the 4C Model (AI Prompts)

Copy and paste these AI prompts in ChatGPT or other:

- *Given our concept [insert], define each C: Consumer Wants & Needs, Cost to Satisfy, Convenience to Buy, Communication.*
- *Suggest research prompts to uncover deeper consumer wants and unmet needs.*
- *Propose cost scenarios balancing value perception and profitability.*
- *Recommend strategies to increase convenience (location, delivery, access).*
- *Generate communication ideas that resonate with target segments and build trust.*



Build a Service Blueprint

A Blueprint maps the full customer experience alongside the internal processes, people, and systems that support it.

By visualizing both the frontstage (what the customer sees) and backstage (what the organization must deliver), teams uncover gaps, dependencies, and opportunities to improve the entire service ecosystem.

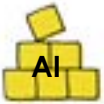
How to run it:

1. **Identify touchpoints**: Map every interaction a customer has with your service.
2. **Frontstage actions:** Document visible employee activities.
3. **Backstage actions:** Capture internal processes that support delivery.
4. **Support systems:** Note tools, policies, and infrastructure required.

Build a Service Blueprint (AI Prompts)

Use these prompts tp map the customer experience to internal processes for seamless delivery.

- *Given our service or product [insert], outline the full customer journey from awareness to post-purchase.*
- *Identify all frontstage (customer-facing) and backstage (internal) activities for each journey step.*
- *Suggest tools or platforms to improve coordination between customer experience and internal processes.*
- *Propose 2–3 alternative process designs to reduce friction or improve service quality.*
- *Highlight potential gaps between customer expectations and operational capabilities and suggest quick fixes.*



Test the Whole System

Testing the whole system allows teams to see how all the pieces of a solution interact in real-world conditions.

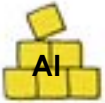
Instead of validating isolated features, this approach highlights dependencies, bottlenecks, and unintended consequences across people, processes, and platforms. Here are some tips:

1. *Assemble all prototypes, processes, and touchpoints into one end-to-end experience.*
2. *Run a complete trial with representative users and operational teams.*
3. *Track interactions, transitions, and dependencies across the system.*
4. *Spot bottlenecks, hand-off issues, or gaps in user experience. Adjust and re-test until the whole system runs smoothly.*
4. ***Iteration Loops:** Review results. Decide: pivot, persevere, or pause.*

Test the Whole System (AI Prompts)

Copy and paste these prompts in ChatGPT:

- Given our concept [insert], outline all interconnected components (people, processes, technology, policies).
- Propose a simulation or pilot that tests the end-to-end experience for users.
- Suggest metrics to track performance across technical, operational, and user satisfaction dimensions.
- Identify weak points or bottlenecks that only appear when the full system is running.
- Recommend contingency plans for critical failure points uncovered during testing.



Run Pilots

Test your concept in a small, controlled environment before a full launch. Use it after initial prototyping and concept validation, to learn how it works in the real world.

How to use:

❶ ***Define objectives and select scope***: *what do you need to learn from the pilot?choose a limited location, customer segment, or feature set.*

❷ **Plan duration:** *long enough to gather good insights, short enough to adjust quickly.*

❸ **Set metrics:** *track success, challenges, and unintended effects.*

❹ ***Debrief and adapt*** : *refine before scaling.*

❹ **Story of Evidence:** *capture evidence from pilots to strengthen the launch story.*

Run Pilots (AI Prompts)

Refine and de-risk your solution with AI-assisted pilot planning.

- *Given our concept [insert], suggest 3–5 pilot scenarios with varying scope and audience.*
- *Propose low-cost ways to replicate real conditions without committing full resources.*
- *Recommend key metrics to track during the pilot, tailored to our goals.*
- *Identify operational or user experience risks before launch.*
- *Suggest ways to gather feedback during the pilot (unobtrusively)*

AI

Launch the Solution

Launching *is the moment when a solution moves from prototype to real-world offering. A well-designed launch ensures that users understand, adopt, and engage with the solution from the start.*

How to run it:

- ***Define Launch Objectives*** *– Be clear on whatsuccess looks like: awareness, adoption, first sales, or feedback.*
- ***Craft the Launch Story*** *– Create a compelling message that explains the what, why, and how of the solution.*
- ***Plan Channels & Timing*** *– Decide how to reach users (events, digital, partners) and choose the right moment to maximize impact.*
- ***Prepare Support Systems*** *– Ensure customer service, logistics, and internal teams are ready to handle first adoption.*
- ***Measure & Learn*** *– Track early reactions and metrics to refine quickly after launch.*

Launch the Solution (AI Prompts)

Collaborate with AI using the following prompts:

"Create a 90-day go-to-market roadmap for this concept, broken into weekly milestones for marketing, sales, product, and operations."

- *"Identify the top 5 risks to a successful launch and suggest mitigation tactics for each."*
- *"Draft 3 variations of the launch announcement — one for early adopters, one for industry press, one for internal stakeholders."*
- *"Suggest the pros and cons of launching in Q1 vs Q3 for this industry, based on market patterns and buyer behavior."*

Scale the Solution

Scaling ensures that a solution grows beyond the pilot stage to reach more users, markets, or contexts. It's about replicating success while maintaining quality and alignment with user needs. Scaling turns a good idea into a sustainable impact.

Key Considerations:

1. ***Identify scaling models:*** *Replication, adaptation, licensing, franchising, digitalisation.*

2. ***Evaluate fit:*** *Match scaling type to resources, market conditions, and organisational strengths.*

3. ***Test small:*** *Pilot the chosen scaling approach before committing fully.*

4. ***Investment Readiness:*** *"What resources are required to sustain growth? Are you investment-ready?*

Scale the Solution (AI Prompts)

Use these AI prompts to collaborate with ChatGPT or other.

- *"Analyze this business model and identify which parts can scale easily and which may break under growth pressure."*
- *"List 5 possible ways to expand the customer base — including geographic expansion, adjacent market entry, and new segment targeting — and propose a test for each.*
- *"Propose 3 low-risk experiments to test if this concept can double sales without doubling costs."*
- *"Suggest ways to automate, outsource, or streamline high-effort processes while maintaining quality."*
- *"What allies or partners are needed to grow impact responsibly?"*

.

Select Scaling Path

Not all scaling looks the same. Some solutions scale by growing bigger (more users, more markets), while others scale by going deeper (expanding features, improving value), or wider (adapting to new contexts). Understanding the different types of scale helps teams make strategic choice how to grow.

Here are key Considerations:

1. **Clarify the Goal** – Is the priority to reach more people, improve outcomes, or adapt to new contexts?

2. **Explore Growth Paths** – Discuss Scale Up (new users/markets), Scale Deep (greater impact per user), and Scale Out (spread into new settings/partners).

3. **Evaluate Fit** – Use criteria like resources, user needs, and mission alignment to assess which growth path is most viable.

4. **Choose and Plan** – Select one or combine paths, then sketch an experiment to test the chosen scale approach.

Select Scaling Path (AI Prompts)

Use the following AI prompts, by coping and pasting into ChatGPT or other:

- *Suggest different scaling models (geographic, product line, channel).*
- *Recommend pros and cons for each approach in our case.*
- *Propose key indicators for scaling readiness.*
- *Suggest pilot approaches to test scaling potential.*
- *Recommend partnerships that could accelerate scale.*

.

DIVERGENT THINKING

CONVERGENT THINKING

DIVERGENT THINKING

1. Apply 4D Frame
2. Discover the Purpose
3. Define the audience
4. Develop the content
5. Identify Key messages
6. Humanise Data
7. Visualise data
8. Find Story in the data
9. Structure the story
10. Create a Storyboard
12. Make Meaning in the middle
13. End to Make it stick
14. Write crisp titles
15. Write a recommendation
16. Deliver for Impact
17. Use Voice and Tone
18. Use body language
19. Design presentation slides
20. Rehearse and Refine

CONVERGENT THINKING

1

Apply 4D Frame

The 4D FRAME is a human centred approach that equips you with key questions to ask yourself when preparing and delivering your communication.

The Frame can be used in any context, communicating to one or to many, face to face and virtual, formal or informal.

The four Ds are:

1. Discover the Purpose (Why?)
2. Define the Audience (Who?)
3. Develop the message (What?)
4. Deliver for impact (How?)

Apply 4D Frame (AI Prompts)

- *Given our project [insert], outline a 4D Frame narrative covering Why, Who, What, and How.*
- *Suggest 3 variations of the 4D Frame for different audiences.*
- *Recommend prompts to deepen the "Why" and connect emotionally.*
- *Propose ways to integrate visuals into each part of the frame.*
- *Suggest follow-up questions to test clarity and engagement.*

2

Discover the Purpose

Start with WHY!

Why do you need to communicate/present/ talk? What do you want to achieve with it? What is the aspired outcome?

For example:

- "As a result of my talk, the team will have a shared understanding of where we want to get to";
- "As a result of my presentation, the product owner will be able to make an informed decision on the investment".

Having the outcome in mind will help you focus during preparation and delivery. It will also help you measure how you did.

Discover the Purpose (AI Prompts)

- *Generate 5 ways to articulate the core purpose of our story.*
- *Suggest metaphors or analogies to express our purpose memorably.*
- *Recommend prompts to connect the purpose to audience values.*
- *Propose ways to check if the purpose resonates across diverse stakeholders.*
- *Suggest reframing the purpose for internal vs. external audiences.*

3

Define the Audience

You have been asked to present to a group of people, your bosses, your colleagues, a big conference. Take some time to think about your audience.

Here are some questions for you to ponder:

1. *Who are they? Why are they in the audience?*

2. *What are their goals and aspirations, their fears and frustrations? What do they care about: cost, reputation, revenue?*

3. *What are their beliefs, feelings, questions about the way forward, their sentiment about change?*

Define the Audience (AI Prompts)

- *Create a quick audience persona for our key stakeholders.*
- *Suggest 5 questions to uncover audience motivations and concerns.*
- *Recommend ways to adapt tone, detail, and format for different groups.*
- *Propose channels best suited to reach this audience effectively.*
- *Suggest how to pre-test our story with a small audience sample.*

4

Develop the Content

This stage in the process is about the content.

This is when you start thinking what you know, what research you need, what facts and stories you need to collect, before developing your talk/presentation.

Three key areas to cover:

1. **What you need to say.**
2. **What narrative structure you use.**
3. **What facts and stories you choose to support your key messages**

Develop the Content (AI Prompts)

- *Given our project [insert], outline the top 3 content pillars to include.*
- *Suggest ways to balance data, stories, and visuals.*
- *Recommend prompts for generating strong supporting examples.*
- *Propose methods to remove irrelevant content without losing impact.*
- *Suggest ways to make complex content simple without oversimplifying.*

5

Identify Key Messages

Identify the essential takeaways for your audience. A good tool is Carmine Gallo's three step "Message Plan".

Here it is how it goes:

1. *Create a twitter friendly headline-the most important thing you want to say about yoursef, your product, service or idea.*

2. *Support the headline sentence with three key benefits.*

3. *Reinforce the three benefits with stories, statistics, data.*

Watch Carmine in Youtube. Try it out!

Identify Key Messages (AI Prompts)

- *Generate 3–5 concise key messages from our project.*
- *Recommend ways to make each message memorable and actionable.*
- *Suggest visuals or metaphors for each message.*
- *Propose ways to reinforce messages throughout a presentation.*
- *Suggest how to adapt messages for different communication formats.*

6

Support with data and stories

After identifying your key messages, make them powerful by backing them up with data to convince and stories to connect.

Data builds credibility and appeals to logic, while stories humanise the message and inspire action. Great communicators blend both to ensure ideas are understood, believed, and remembered.

Key things to consider:

1. For each key message, identify one supporting data point and one illustrative story.

2. Keep the data clear and simple – no overload.

3. Choose stories that humanise the numbers – personal, real, or relatable.

Support with data and stories (AI Prompts)

Help me strengthen my key messages.

- *For each message, suggest one compelling data point to prove it.*
- *For each message, suggest a short story or example to make it relatable and memorable."*

Humanize Data

"Humanising data" *means presenting data in a way that connects with people emotionally, cognitively, and contextually.*

How to humanise Data:

1. *Use personas, stories, or testimonials to illustrate data points.*

2. *Translate data into real-world impacts (e.g., time saved, lives affected).*

3. *Add visuals of people, environments, or outcomes—not just charts.*

4. *Include voice of the user/customer in quotes or short anecdotes.*

Humanize Data (AI Prompts)

Bridge numbers and narratives with AI support.

- *Given our dataset [insert], generate short user stories that illustrate key insights.*
- *Suggest compelling ways to pair a statistic with an anecdote or quote.*
- *Propose metaphors or analogies to make data easier to understand.*
- *Identify emotional triggers in the data that can make the message more memorable.*
- *Recommend a structure for blending qualitative and quantitative findings.*

8

Vizualize Data

Communicate complex information clearly and effectively through visuals, when you need to share findings, patterns, or comparisons in a way that's easy to grasp

How to use:

1. **Define the message** — decide the single most important insight to communicate.
2. **Choose the right format** — chart, diagram, infographic, heat map, etc.
3. **Simplify** — remove unnecessary details that distract from the core point.
4. **Highlight key data** — use colour, size, or annotations to draw attention.

TIP:

Test for clarity — show it to someone unfamiliar with the data and refine based on their feedback.

Vizualize Data (AI Prompts)

Use AI to explore, refine, and inspire your visual storytelling.

- *Given our dataset [insert], suggest 3–5 chart or graph types that best match the insight.*
- *Propose alternative layouts that make trends or comparisons clearer.*
- *Generate example captions or titles that emphasise the story in the data.*
- *Recommend colour schemes and visual cues to improve accessibility.*
- *Suggest ways to combine multiple visuals into a coherent narrative.*

Find Story in Data

Turn raw data into a clear, compelling narrative, after analysis, to shape findings into a message that resonates.

How to use:

1. Review your research findings and highlight the 3–5 most surprising or impactful insights.

2. Look for patterns, contradictions, or trends that link these insights together.

3. Identify a central message or "through line" that ties the data to your challenge.

4. Organise your points into a beginning (context), middle (insights), and end (implications).

TIP:

Discard anything that doesn't support your main story.

Find Story in Data (AI Prompts)

- *Given our data [insert], identify the most surprising or important insight.*
- *Suggest ways to frame that insight as a story with a beginning, middle, and end.*
- *Recommend charts or visuals to make the insight instantly clear.*
- *Propose metaphors or analogies to humanise the data.*
- *Suggest questions to provoke audience curiosity before revealing the key point.*

Structure the story

Organise your story for maximum engagement.

Every story has a beginning, middle and end. So should your talk or presentation - have a story structure.

Here are a few tips:

- *Set the story up by introducing characters and establishing the hero's unfulfilled.(the beginning)*
- *Create dramatic action held together by confrontation. (the middle)*
- *Resolve the story-did the main character succeed or fail? (the end)*

Structure the Story (AI Prompts)

- *Given our content [insert], suggest 3 possible story arcs.*
- *Recommend structures suited for persuasion vs. inspiration.*
- *Propose hooks to open the story powerfully.*
- *Suggest pacing strategies to keep attention high.*
- *Recommend ways to close with impact and a clear call to action.*

Create a Storyboard

Before you bring out your Powerpoint or Keynote, or Prezi app, get pen and paper, some post-its and map out key messages you want to express. Here is some structure:

1. *Map out the beginning, what is it you are talking about, how will your idea/team/project change things for the better.*

2. *Plan middle of your presentation, what facts and figures and stories do you need to communicate?*

3. *Sketch out the ending. What are the key points you need to repeat? How can you finish on a high, inspiring your audience to action.*

Create a Storyboard (AI Prompts)

- Create a 6–8 frame storyboard for our presentation or pitch.
- Suggest key visuals or scenes for each frame.
- Recommend ways to balance text and imagery.
- Propose methods to test the storyboard flow with a small group.
- Suggest how to adapt the storyboard for slides, video, or live delivery.

Begin Strong

Capture attention from the first moment, at the start of a presentation, pitch, or report.

How to use:

1. **Lead with impact** — *open with a striking fact, question, or story.*
2. **Set the context** — *briefly outline the problem or opportunity.*
3. **Hook the audience** — *make it clear why this matters to them.*
4. **Preview the journey** — *give a simple roadmap of what's to come.*

Keep it concise — *aim for 1–2 minutes to get into the story quickly.*

Begin Strong (AI Prompts)

Design a powerful opening.

- *Propose opening questions that spark curiosity.*
- *Suggest 5 attention-grabbing openers for our topic [insert].*
- *Rewrite our first sentence to be more engaging.*
- *Generate examples of metaphor or imagery to set the tone.*
- *Suggest culturally inclusive ways to start for a global audience.*

Make Meaning in the middle

Keep the audience engaged and deepen understanding.

How to use:

❶ **Build logically** — *move from context to evidence to implications.*

❷ **Link data to meaning** — *show why the facts matter.*

❸ **Use contrast** — *before vs. after, problem vs. solution.*

❹ **Signpost** — *guide the audience through transitions clearly.*

Engage emotions — *balance logic with relatable stories.*

Make Meaning in the middle (AI Prompts)

Structure your story flow with AI.

- *Outline 3–4 key points in logical order for our story [insert].*
- *Suggest analogies or examples to make each point relatable.*
- *Propose ways to integrate data into each section without overwhelming.*
- *Generate bridging sentences that smoothly connect sections.*
- *Recommend emotional beats to keep energy and interest high.*

End to Make It Stick

Leave a lasting impression and a clear call to action, in the final minutes of your presentation, pitch, or report.

How to use:

1. ***Reinforce the key message*** — *remind them of the main takeaway.*

2. ***Connect to the bigger picture*** — *why this matters beyond the room.*

3. ***Call to action*** — *be explicit about the next step.*

4. ***End memorably*** — *with a quote, image, or challenge.*

Pause — *let the ending land before inviting discussion.*

End to Make It Stick (AI Prompts)

Craft a memorable close with AI.

- Suggest 5 powerful closing statements for our message [insert].
- Propose short calls to action that motivate follow-through.
- Generate metaphor or imagery to make the conclusion vivid.
- Rewrite our closing paragraph to emphasise impact.
- Suggest ways to tie back to the opening for a satisfying full circle.

Write Crisp Titles

Make your message instantly clear and engaging.

When to use: In presentations, reports, or prototypes to grab attention quickly.

How to use:

1. *Summarise the key takeaway in one short, active sentence.*
2. *Use strong verbs and specific language — avoid jargon.*
3. *Make it audience-focused: what matters most to them?*
4. *Test alternatives: write 3–5 versions and choose the clearest, most compelling.*

Write Crisp Titles (AI Prompts)

- Rewrite our section or slide titles to be more engaging and action-oriented.
- Suggest 5 alternative headlines for each key message.
- Recommend titles that work across presentation, report, and digital formats.
- Propose ways to use questions as titles to spark curiosity.
- Suggest methods to test which titles resonate most.

16

Write a Recommendation

Deliver concise, actionable proposals for decision-makers, senior leadership or sponsors.

How to use

1. *Start with what you recommend — be direct and specific.*
2. *Explain why this matters now, using data, insights, and context.*
3. *Describe how it can be implemented — give a realistic, high-level plan.*
4. *Keep it concise — executives should grasp it in under 2 minutes.*

End with the expected impact or success measures.

Write a Recommendation (AI Prompts)

- *Given our findings [insert], draft a one-paragraph executive recommendation.*
- *Suggest ways to prioritise recommendations based on impact and urgency.*
- *Recommend a format that highlights both benefits and risks.*
- *Propose clear next steps for each recommendation.*
- *Suggest how to adapt recommendations for different executive personas.*

Deliver with Impact
Use Voice and Tone

Use your voice and tone to keep attention and convey confidence, during presentations, pitches, and storytelling moments.

How to use:

❶ ***Vary your tone*** *— avoid monotone by shifting pace, pitch, and energy.*

❷ ***Pause with purpose*** *— let key points land.*

❸ ***Match tone to message*** *— serious, inspiring, playful, depending on content.*

❹ ***Check clarity*** *— articulate words so ideas are easy to follow.*

TIP: Practice aloud *— rehearse to build comfort and control.*

Use Voice and Tone (AI Prompts)

- *Suggest voice techniques (pace, pauses, emphasis) for our script [insert].*
- *Rewrite our message in 3 tone variations (inspiring, formal, conversational).*
- *Propose ways to use tone to highlight calls to action.*
- *Identify filler words or weak phrasing and replace with stronger*

Use Body Language

Reinforce your story with confident, open, and engaging body language, when you present in person or on video.

How to use:

1. **Stand tall** — *posture communicates confidence.*

2. **Use gestures** — *emphasise key points naturally.*

3. Make **Eye contact** — *connect with your audience, not your slides.*

4. **Be aware of movement** — *avoid pacing or fidgeting.*

TIP: Adapt to medium — *adjust for stage, meeting room, or camera.*

Use Body Language (AI Prompts)

- *Suggest 5 gestures to match the main points of our presentation [insert].*
- *Recommend adjustments for body language in virtual vs. in-person settings.*
- *Propose ways to align facial expressions with message tone.*
- *Generate feedback prompts to practice posture and stance.*
- *Suggest grounding techniques to reduce nervous movements.*

Design Presentation Slides

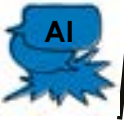
Design slides that support your story, not overwhelm it. You may use them when creating visuals for pitches, workshops, or reports.

How to use:

1. **Keep it simple** — one idea per slide.
2. **Use visuals over text** — images, diagrams, and charts communicate faster.
3. **Limit text** — avoid full sentences, aim for keywords.
4. **Highlight the key point** — make the takeaway obvious at a glance.
4. **Design for readability** — clear fonts, strong contrast, uncluttered layout.

Presentation Slides (AI Prompts)

- *Redesign our slide deck [insert outline] into 10 clear, minimal slides.*
- *Suggest 3 alternative visual formats for the same content.*
- *Generate strong slide titles that reinforce the story.*
- *Recommend colour palettes and font pairings for clarity.*
- *Propose ways to reduce text-heavy slides into visuals or diagrams.*



Rehearse and Refine

Strengthen your delivery by practicing, receiving feedback, and improving before presenting to your real audience.

How to use:

1. **Practice out loud** — *rehearse in real conditions, not just in your head.*

2. **Time yourself** — *check pacing against your allocated slot.*

3. **Record and review** — *watch for voice, tone, and body language.*

4. **Seek feedback** — *practice with a colleague or test audience.*

4. **Refine and repeat** — *adjust based on feedback until confident.*

Rehearse and Refine (AI Prompts)

- Given our presentation [insert text/slides], suggest a timed run-through plan.
- Identify likely sections where audience attention may drop and propose fixes.
- Generate feedback prompts for a colleague or test audience to use.
- Suggest alternative wordings for sentences that may be unclear or awkward.
- Recommend pacing adjustments to ensure energy flows throughout.
